Introduction

Module 4 defined the overall activities that enable IAHM to disseminate its humanitarian message and the various initiatives with which it is associated, towards both Donor and Beneficiary Countries. In order to make the system of world humanitarian health assistance conceived by IAHM become really operative, it was indispensable to make the Association known at international level. This was made possible by creating direct contacts between IAHM and government authorities, as also with representatives of the most significant health realities in the sample countries identified. In the preparatory phase of the project for the development of Module 4, the following activities were scheduled:

The total development of Module 4 required intense research activity in each sample country as regards its main public and private hospital facilities, university teaching hospitals, and NGOs.

Compared to Module 1, the research sources were much less numerous and articulated, although the work involved in creating the database took a considerable amount of time, especially in the phase of organizing the material found.

The activity of developing Module 4 began with a search for the universities, the public and private health facilities, and the NGOs in each sample country. This was followed by a process of synthesis of the material found, which was reorganized in special tables for each sample state. Each of these tables was subdivided on the basis either of territory (region or country, depending on the administrative organization of each country examined) or of the cities where the health facilities in question are located. Then, for each health facility, the full name was inserted, together with its web or e-mail address (if available), address, and telephone/fax number in order to guarantee ease of contact. In view of the very high number of facilities found, the IAHM Projects Director was empowered to proceed to make a selection of facilities to contact. These were sent a letter of presentation to the Association, together with an invitation to initiate possible acts of cooperation in the humanitarian field.

The report on Module 4, unlike the previous ones, does not contain a detailed analysis of each single activity, but only synthetic tables regarding the individual sample countries.

ITALY:

List of main university hospital facilities subdivided on the basis of region

Analysed: 17 regions.

Identified: **27 Medical Faculties with attached University Polyclinics** and **117 Hospital Facilities**, for an overall total of 144 centres.
